

TETHER OPERATIONS

During the periods of flight operations on Friday, Saturday and Sunday, tether operations will be conducted on field #1 at Rancho San Rafael Park. All pilots should be aware of this and conduct their flights accordingly.

Any pilots returning to the field for competition (Blackjack, JDG, MNDD, MXDD) must remain clear of these balloons in all directions.

Tether heights will be 25-50 feet AGL not including the structural height of the balloons themselves. Please provide a minimum of 25 feet of vertical clearance over and above tether and structural heights. It must be assumed at all times that the tethering balloons will ascend abruptly and without prior notice.

Please do not land in the immediate vicinity of any tethered balloon, its handling lines, other equipment or spectator waiting lines.

If a landing in field #1 is eminent please do so as far toward the North, (the dirt road or beyond), as possible.
